How can I search for cases in MAVEN?

On the MAVEN splash screen, you can find the “Search Event” tab on the pane on the left side.
Clicking on the Search Event tab will bring up a new window containing the different search criteria.
The search function also features a handy trick, which is outlined below:

The search function has a feature where after typing two letters, you are able to add an asterisk (*). As seen in the example above, this will search for all names beginning with these letters.

Similarly, leading with an asterisk and adding letters at the end will search all names ending with those letters. i.e.: searching "ton" would find all names ending in -ton.
